

# Structure Plane

## Information Architecture

A simple single page scrolling navigation structure with a fixed navigation bar.

## Interaction Design (IXD)

- Site logo will bring user back to top of page as is standard
- Menu items will have a rollover effect to show that clicking it will have an effect. Nav bar will use hamburger icon on mobile
- Buttons will also have rollover effect for same reason. External link buttons will look different from internal scroll buttons to offer visual distinction of their effects
